

## Our Service Packages

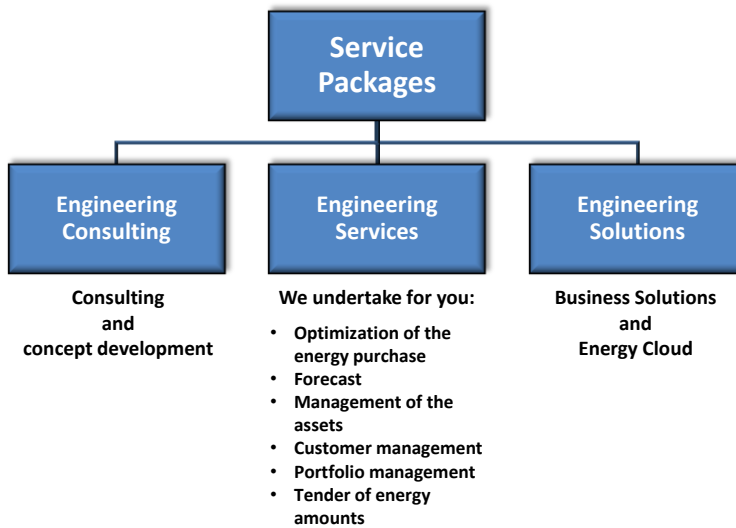

### Consulting - Services - Solutions

#### Your questions:

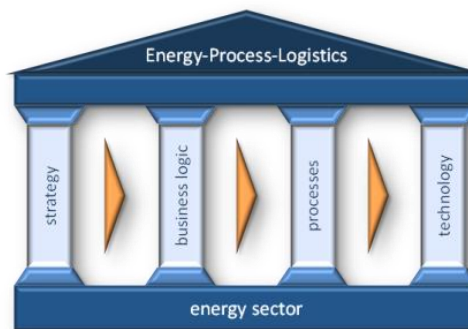

- How can the energy purchase be organized at optimal costs?
- Are there options to enhance the forecast quality and what could they look like?
- How should an optimal portfolio management be constructed?
- Which IT solution can be used to support the energy management?

#### Our solution:

#### Information:

**Dr. Hollmann & Kammel Management Consultants** possess many years of experience in the liberalized energy market and have developed Energy-Process-Logistics (EPL) which is an integral methodology to offer the customers Consulting, engineered services and solutions.

The energy sector is undergoing an elementary transformation process.

The increase of the proportion of renewable energies, new technologies for an intelligent and service-oriented energy supply, the development of energy services and the pursuit of energy efficiency measures alter the value chain and the future business segments of energy companies.

Cost-reduction targets, raising market and customer orientation, increased cooperation and stricter regulation are characteristics of the energy sector.

Our Service Packages were developed in consideration of long-term experiences with customers from the energy sector and are based on their requirements. It is a central aspect that besides consulting the concrete implementation in the course of the Engineered Services and the supply of Engineered Solution from one source is possible which enables an integral view on the challenges of our customers.
